Objective	I am interested in joining a company as a Full Stack Developer where I can apply my skills using MERN stack with TypeScript and Nextjs technologies in developing high performance web applications suitable for customers and their expectations as well in problems solving as technical knowledge to complete projects successfully.
Education	Amjad Institute College - Nabatieh – Bachelor’s degree I have Bachelor’s degree in Information Technology(Software branch). Since (2020-2023).
Certificate	<p>-Semicolon Academy – Offensive Cyber Security (Feb-Mar 2024):</p> <p>Throughout the program, I gained in-depth skills in utilizing Burp Suite and identifying vulnerabilities such as IDOR (Insecure Direct Object References) and CSRF (Cross-Site Request Forgery), enhancing my ability to analyze and develop attack and defense strategies in cybersecurity environments.</p> <p>-ESA Business School: Full-Stack Developement (May-December 2024). -ESIEE-IT France: Full-Stack Development (May-December 2024).</p>
Skills & Abilities	<p>Programming Languages: HTML, CSS, JavaScript, TypeScript, Java, Php.</p> <p>Frameworks and Libraries: React.js, Redux Toolkit, Node.js, Express.js, Next.js.</p> <p>Database Management: PostgreSQL,MongoDB, MySQL.</p> <p>Version Control: Git, GitHub.</p> <p>Design Tools: Figma.</p> <p>Agile-Methodology: ClickUp</p>
Projects	<p><u>E-commerce Mobile App: (React Native CLI & Expressjs) – 2025</u></p> <p>I transformed a previously developed MERN e-commerce web application into a mobile app using React Native CLI. The backend, built with Express and connected</p>

	<p>to MongoDB. On the mobile side, I implemented product browsing, detailed product views, shopping cart functionality, and secure user registration/login. Additionally, I integrated an order system where users can place orders and track them via WhatsApp integration. Redux Toolkit was used for efficient state management, ensuring a seamless and responsive mobile user experience. <i>(codes in my Github Account)</i></p> <p><u>Doctor-appointment-booking: (Nextjs, Expressjs,PostgreSQL) – 2025</u> Developed a full-stack web application for a healthcare center that enables patients to register, log in securely using JWT, browse doctor profiles, and book appointments online. Includes a protected admin dashboard for managing doctors and appointments. Utilized Sequelize ORM for database management and PostgreSQL for structured data storage. Focused on building a responsive, secure, and user-friendly system using modern web technologies. <i>(codes in my Github Account)</i></p> <p><u>ESA-HRIS: (Nextjs and TypeScript) – 2024</u> I worked with my team on enhancing the Human Resource Information System (HRIS) for ESA Business School, where we added new features to an existing system.</p> <p>My main role in the project was working on the Admin Tab, where I added significant improvements and developed the user interface to meet the needs of the administration efficiently and easily</p> <p><u>BetelMoune: (MERN Stack) – 2024</u> Developed a platform to support Lebanese women in acquiring skills in Mouneh production and handcrafts, enabling them to sell their products online. Utilized MERN stack, Socket.IO, and additional Node.js technologies, including a chatbot, at ESA Coding Lab. Contributed to both front-end and back-end development of pages for products, product details, cart, and chat groups to facilitate online sales and communication</p> <p><u>Chat-app: (MERN Stack) - 2023</u> dynamic chat web app using the MERN stack and powered by Redux Toolkit! It provides seamless real-time communication with an elegant user interface. From secure user authentication to responsive design, every aspect has been meticulously crafted. <i>(codes in my Github Account)</i></p>
